DOCKETED BY

DOCKET NO. E-01750A-12-0289

**APPLICATION** 

Mohave Electric Cooperative, Incorporated ("MEC"), through its undersigned attorneys, submits this Application requesting approval of its 2013 Renewable Energy Standard and Tariff ("REST") Plan, including its renewable energy standard tariff (the "2013 REST Plan") pursuant to the Commission's Renewable Energy Standard ("RES") rules (and in particular AAC R14-2-1813 and R14-2-1808) and, to the extent not otherwise superseded, the Commission Environmental Portfolio Standard ("EPS") rules (and in particular AAC R14-2-1618). This Application is supported by the following:

1. MEC is a member-owned non-profit cooperative that is certified to provide electricity as a public service corporation in the State of Arizona.

2. MEC's specific REST Plan for 2012 was approved by Commission Decision No. 72802, dated February 2, 2012 and Decision No. 73228, dated June 5, 2012. MEC seeks no change in its REST surcharge and only a minor modification to its Plan for 2013.<sup>1</sup>

- 3. By this Application, MEC files its REST Plan for 2013, attached hereto as Exhibit 1 and incorporated herein by this reference. MEC's 2013 REST Plan maintains the eight significant features of its 2010 REST Plan, with an increase in funding for the "Other Programs Community-Based Projects".
  - 4. The eight major features of MEC's 2013 REST Plan are:
    - a. Voluntary Renewable Energy Program ("Green Energy")
    - b. Member Self-Directed Renewable Energy Program
    - c. SunWatts Residential and Commercial Incentive Program
    - d. Clean Renewable Energy Bonds (CREBS)
    - e. SunWatts Large-Scale Program (In conjunction with AEPCO)
    - f. Analysis of Geothermal Resources Within and Outside MEC's Service
      Territory
    - g. Distributed Generation Solar Installation Within MEC's Service
      Territory
    - h. Other Programs Community-Based Projects
  - 5. All communications regarding this Application should be provided to:

Michael A. Curtis
William P. Sullivan
Curtis, Goodwin, Sullivan,

## MOHAVE ELECTRIC COOPERATIVE, INCORPORATED RENEWABLE ENERGY STANDARD and TARIFF

### I. BACKGROUND

Mohave Electric Cooperative, Incorporated ("MEC") is a rural electric distribution cooperative headquartered in Bullhead City, Arizona. MEC provides electric service to approximately 32,500 members in portions of Mohave, Coconino, and Yavapai counties. MEC owns and operates 112 miles of 69 kV sub transmission lines and 1,405 miles of distribution lines. MEC employs approximately 76 employees and provides service to 26 meters per mile of line in its service territory.

MEC is presently a "partial requirements" wholesale power customer of the Arizona Electric Power Cooperative, Inc. ("AEPCO") and purchases additional wholesale resources from other market providers. In 2011, MEC delivered 658 gigawatt-hours in retail sales to its members. After several years of declining sales, this represents a very slight increase of ½% compared to 2010.

Since the inception of the Environmental Portfolio Standard, ("EPS"), and subsequently the Renewable Energy Standard and Tariff, ("REST") through 2009, AEPCO had filed its annual compliance reports with the Director, Utilities Division, ACC, on behalf of its four Arizona member distribution cooperatives, including MEC. Thereafter, commencing with plan year 2010, MEC, has designed and implemented its own REST Plan, independent from AEPCO. This application extends MEC's independent REST Plan, with some modifications explained herein, for 2013.

### II. MEC's REST PLAN

The MEC REST Plan will continue to include eight components intended to achieve our annual renewable energy goals, which for 2013 is 1.5% of 2013 retail energy sales, adjusted for projected savings achieved through MEC's EE Plan. Those components are:

- Voluntary Renewable Energy Program (unchanged)
- Member Self-Directed Renewable Energy Program (unchanged)
- SunWatts Residential and Commercial Incentive Program (unchanged)
- Clean Renewable Energy Bonds (CREBS—PV for Schools) (unchanged)
- SunWatts Large-Scale Program (In conjunction with AEPCO) (unchanged)
- Analysis of Geothermal Resources Within and Outside of MEC's Service Territory (unchanged)
- Distributed Generation Renewable Energy Installation Within MEC's Service Territory (unchanged)
- Other programs—Community-based Projects (modified)

The first four incentive programs are self- selecting; MEC can offer, but cannot compel, customers to undertake renewable projects. The geothermal resources and distributed generation renewable energy installation are programs directed by MEC that all customers will be able to utilize and share in the benefits. The SunWatts Large-Scale Program, developed in conjunction with AEPCO, provides renewable resources for delivery through AEPCO and provides benefits to MEC members through MEC's membership in AEPCO.

Existing MEC rebates, rebate caps, details, and conditions were effective February 2, 2012 with some modifications effective June 5, 2012. Modifications of the Plan proposed herein will go into effect on January 1, 2013 unless otherwise specified in this Plan or the order of the Commission approving the MEC REST Plan for 2013. Members with existing renewable energy systems are not eligible for additional rebates on the existing systems as a result of changes to the MEC REST Plan.

As discussed below, the modification to the Community-based programs is a budget increase of \$25,000 for a total budget of \$50,000 to be used at one or two fire stations within MEC's service territory. The increase to this budget is accomplished by an equal reduction to the budget for Administration.

MEC is proposing the following change to its 'Renewable Energy Standard Tariff' for 2013; a copy of which is included in the REST Tariffs section of this REST Plan. MEC supports the Commission's 2012 actions to require customers who benefit by receiving incentives under the REST rules to provide equitable contribution to future REST benefits for other customers. Therefore, MEC proposes a modification to its REST tariff to require residential, small commercial, and large power customers who receive incentives under the REST rules to pay a fixed cost equal to the applicable monthly REST cap. MEC proposes to apply this requirement only to renewable systems installed on or after the approval date of this REST Plan for 2013.

### **Voluntary Renewable Energy Program**

MEC will continue to offer their retail customers a voluntary program whereby participating members of the Cooperative can support the purchase of "green energy." "Green Energy" will be offered to customers for purchase in 50 kWh blocks at a cost of \$2.00 each. "Green Energy" purchases will be reflected as a line item on participating members' monthly invoice. All funds received by MEC under this program will be added to amounts collected from surcharges and used for support of renewable energy projects. Advertising and other promotional materials and activities encourage participation in this program. MEC is not proposing any change to its 'Voluntary Renewable Energy Program Tariff' for 2013; a copy of which is included in the REST Tariffs section of this REST Plan.

### Member Self-Directed Renewable Program

An eligible MEC customer, who pays more than \$25,000 annually in renewable energy surcharge funds, may apply to MEC to receive funds to install distributed renewable energy resources. An eligible customer seeking to participate in this program shall submit to MEC a written application that describes the renewable energy resource that it proposes to install and the

projected cost of the project. All renewable energy credits derived from the project shall be applied to satisfy the Cooperative's annual renewable energy requirement. This component is further described in greater detail in the 'Renewable Energy Customer Self-Directed Tariff' MEC is not proposing any change to its 'Renewable Energy Customer Self-Directed Tariff' for 2013; a copy of which is included in the REST Tariffs section of this REST Plan.

### SunWatts Residential and Commercial Incentive Program

The SunWatts Incentive Program pays customers rebates to encourage the installation of qualifying member-owned photovoltaic ("PV"), solar water heating and small wind turbine systems. All incentive programs will be rebated on a first come, first served basis until funding is exhausted. Once a customer submits a reservation form, no further reservation form will be accepted from the customer until the pending installation has been fully completed and the rebate provided or the reservation is voluntarily withdrawn.

For residential and small commercial PV and wind systems of all system sizes up to 50 kW, MEC will pay \$0.35 / watt of installed nameplate capacity, up to 40% of the total cost of the system. The dollar cap for PV and wind systems installed at a single location is \$25,000 for both residential and commercial systems. To qualify for incentives, the combined generation capacity at the location is limited to a maximum of 125% of the total connected load at the location and is limited to one installation per service entrance for residential and commercial PV and wind turbine systems.

This incentive program is unchanged from the approved 2012 REST Plan, which includes an approved modification reducing the incentive effective June 5, 2012.

All PV and small wind projects larger than 50 kW are not covered by the REST tariff incentives and will be dealt with on a case-by-case basis through negotiated contracts.

For residential solar water heating systems, MEC will continue to provide a rebate of \$0.75 per kWh of energy saved during the system's first year of operation. Solar systems must be OG-300 certified solar systems to be eligible for the SunWatts rebate. A list of OG-300 certified solar systems is available at the Solar Rating and Certification Corporation's website <a href="https://www.solar-rating.org">www.solar-rating.org</a>. MEC will only rebate those systems which replace a traditional electric water heater. In addition, the customer contribution to the cost of the solar water heater project must be a minimum of 15% of the total project cost after accounting for and applying all federal and state incentives. Solar swimming pool heating systems are not eligible for the SunWatts rebate.

In addition to the foregoing programs, MEC will continue to include Biomass, Biogas, Daylighting and Solar Space Cooling. The Daylighting program would rebate \$.20 per kWh saved during the first year. The other programs would offer Production Based Incentives ("PBI") paid for Renewable Energy Credits over a ten-year period. The Biomass/Biogas incentives per kWh will be: \$0.06 for electric generation, \$0.035 for Biomass/Biogas CHP electric, \$0.018 for Biomass/Biogas CHP-Thermal, \$0.015 for Biomass/Biogas thermal and

\$0.032 for Biomass/Biogas cooling. The Solar Cooling PBI would be for ten years in the amount of \$0.129 per measured kWh.

### Clean Renewable Energy Bonds ("CREBs") - PV for Schools

All eligible schools in MEC's service territory have received PV systems under the approved 2010 and 2011 REST Plans. The Commission has previously authorized MEC to provide these systems at no cost to the schools by utilizing up to \$1,000,000 of internal MEC funds Repayable with REST funds over ten years at the CREB rate. See Decision No. 72092.

MEC still intends to apply for multi-year funding of its PV for Schools program by application for CREBs or similar Federal and State funding programs as discussed below in order to repay the internal funds advanced for the projects and to otherwise assist in accomplishing renewable energy goals, when and if funding is available for such purposes. At the present time no funding of this type is available; however, MEC will continue to review Federal and State renewable energy funding programs and will apply for funds when they are available to MEC to assist in accomplishing renewable energy goals and reflect the projects associated with those funding sources in future REST Plans. Once Federal or State funds become available for this program for use in 2012 or 2013, MEC would evaluate the CREBs terms and conditions including the ten year interest rate, and deploy CREBs funding as in the best interest of the REST program.

### SunWatts Large-Scale Program

The SunWatts Large-Scale Program has two components: A Purchase Power Contract Program and a Generating Program. The Purchase Power Contract Program is administered by AEPCO on behalf of its member cooperatives. MEC will continue to participate with AEPCO and its member cooperatives on projects that are determined to be beneficial and help in meeting the REST Plan requirements.

### **Geothermal Resources**

### Within The MEC Service Territory

MEC, in partnership with Navopache Electric Cooperative, Inc., ("NEC"), has retained the firm of Black & Veatch, Consulting Engineers, ("B&V"), to investigate the feasibility of developing geothermal energy resources within each cooperative's service territory. B&V has partnered with GeothermEx, Inc. of Richmond, California to evaluate the literature in the public domain and information provided by NEC to identify and characterize known thermal waters, heat flow and geology.

GeothermEx will use the data collected and evaluated to describe geothermal targets, within or near the two service territories, in terms of depth, host formations and, if possible, order-of-magnitude estimates of generation potential. For the sites identified, preliminary estimates of land status, access, proximity to transmission infrastructure and water availability

will be determined. A program of exploration and confirmation drilling, including costs and approximate timelines, has been developed by GeothermEx.

GeothermEx and B&V have delivered their final report to the Cooperatives, which concludes that the potential for an initial 5 MW geothermal generation resource is feasible in both service territories, with the NEC location having the highest probability for success. NEC has initiated a grant application to the DOE to fund exploratory drilling. MEC will monitor the progress of NEC and is prepared to partner with NEC in the development of the geothermal resource once exploratory drilling indicates that the project will proceed to commercial development. However, MEC has not budgeted any REST funds for this program for 2013.

### **Outside MEC's Service Territory**

MEC continues its Willcox Greenhouse Geothermal Project agreement with Sulphur Springs Valley Electric Cooperative and AEPCO. The project has provided 2,192,050 RECs to MEC.

### Distributed Generation Solar Installation Within MEC's Service Territory

MEC continues to explore development of a renewable energy generation project up to 5 MW within the MEC service territory. The Cooperative is considering a developer-based project, as well as exploring MEC's own development of a renewable energy project within its own load bubble.

Funds allocated for this project can be utilized on any qualified renewable project within MEC's Service Territory up to 5 MWs, excluding any renewable for which MEC has another specific program under this REST Plan.

MEC currently has three engineering agreements in place with renewable energy (pv/solar/wind) project developers. One of these pv/solar projects is significantly active. MEC will continue to work with developers to bring a cost effective project into the Cooperative's renewable energy portfolio.

### **Other Programs**

<u>Community-Based Programs</u> - MEC proposes to expand this program to include the following in this program with a total budget of \$100,000:

Habitat for Humanity/Community Services Program - In the past MEC has partnered with Habitat for Humanity to offer alternative energy options to low income housing in MEC's service area. MEC's REST Plan's budget allows for one project per year that would not exceed \$25,000. In years where Habitat for Humanity does not designate an eligible low income housing project under this program by July 1 of the year, MEC will select another community based non-profit organization, to receive the \$25,000 renewable energy project.

<u>PV for Fire Stations Program</u> – MEC will select an eligible Fire Station in the service territory for one PV project per year not to exceed \$50,000, or two Fire Stations for a PV project not to exceed \$25,000 each.

Non-profit project – MEC will select one additional eligible non-profit facility to receive a PV system not to exceed \$25,000.

In 2010, 2011, and 2112 MEC successfully facilitated federal ARRA funding and private donations to enhance REST Plan approved community projects. The Cooperative will continue to pursue government and private donations for future projects under this program.

PV For Schools Program - This program has been described under the CREBs discussion.

<u>Educational Grant Program</u> - One school per year, in MEC's service area, would be offered an educational grant of no more than \$5,000 for the development of renewable energy generation educational curricula for the classroom.

Administrative, Advertising/Promotion, and Research and Development – MEC advertises and promotes its REST programs in a variety of mediums including, but not limited to, bill inserts, monthly newsletter, television, radio and community events. MEC will not use more than 15% of total surcharge funds for administration, research and development and advertising expenses. At the end of each program year, unused funds will be carried over to fund activities and programs in the following year.

MEC maintains information on its customer driven programs on its website at <a href="https://www.mohaveelectric.com">www.mohaveelectric.com</a>. In coordination with the Grand Canyon State Electric Cooperative Association, MEC continues to support and participate in the Arizona Goes Solar website mandated by the Commission, the administration of which is spearheaded by Arizona Public Service Company.

### Request for Flexibility to Shift REST Funds between Programs.

MEC anticipates the incentive program is adequately funded for both 2012 and 2013. No waiting list or backlog of incentive requests currently exists.

All programs will be available until the budget funds for the program are exhausted; however, MEC also seeks ACC authorization to continue to be able to shift approved REST Plan funds between programs, in order to increase budgets for programs in the 2013 Plan where appropriate. MEC proposes that the conditions of shifting funds already included in MEC's 2012 Plan would be continued for 2013.

### These conditions include:

- a. No more than 15% of a Program's approved budget may be affected by the shift.
- b. MEC would notify Staff of any plan to shift funds no less than 60 days prior to implementing the shift.

- c. If Staff notifies MEC in writing that it opposed the shift of funds, no shift would occur unless Mohave first secures a Commission order authorizing the shift.
- d. Within 60 days following any funds shift, MEC would submit to Staff a revised budget recognizing the shift of funds.

### **Conclusion and Goals**

MEC has 246 residential and small commercial photovoltaic (PV) arrays installed within its service territory. The PV arrays range in size from 2 kW to 46 kW for a load reduction of 1711 kW and an annual delivery of 3,748,253 kWh. MEC also has 25 school and Government PV installations, ranging in size from 8 kW to 50 kW for a load reduction of 455.6 kW and an annual delivery of 982,807 kWh. MEC has 25 small wind generators installed within its service territory. The wind generators are all rated at 2 kW for a load reduction of 55 kW and an annual delivery of 96,538 kWh. MEC has 5 solar water heating systems installed within its service territory with an annual delivery of 13,387 kWh. Member-owned systems installed prior to January 2010 were during MEC's participation in the AEPCO REST Plan. Systems installed since 2010 were under MEC's independent REST Plan. (See Exhibit A to this REST Plan.)

MEC partnered with several government and non-profit organizations on the following community-based projects:

Bullhead City Habitat for Humanity installed a 3.5 kW PV array on the area's first Habitat for Humanity house completed in late 2009 at a cost of \$25,000.

Habitat for Humanity decided not to construct a home in our service area in 2010, so MEC partnered with the Boys and Girls Club to install a renewable energy system at a cost of \$54,000. A private foundation donated \$25,000, with \$4,000 donated by the solar contractor, added to the REST Program funding of \$25,000 to install a 12.375 kW system.

A second Habit for Humanity Home was completed in 2012 and MEC committed \$25,000 in REST funds for a 4.3 kW PV system on the home.

MEC also partnered with Bullhead City to install a 50 kW PV system located at City Hall. The system produces approximately 88,296 kWh annually. MEC advanced the \$394,000 cost of the project which was funded by a combination of federal grant monies and REST funds. Approximately \$53,000 will be repaid to the REST fund by Bullhead City, at no interest, over the 25 year life of the project from energy savings.

Under the "PV for Schools" program for 2009, 2010 and 2011, all eligible schools in MEC's service territory received PV systems through the approved REST Plans. The systems averaged 16 kW at each school. MEC was also approved to provide these systems at no cost to the schools by utilizing up to \$1,000,000 of internal MEC funds. Details are described under the CREBs discussion. Schools received \$50,000 from the REST Program and an additional \$10,000 of ARRA funds secured by MEC.

Mohave Community College, Bullhead City Campus received \$150,000 for a 40 kW PV system completed in 2011. REST funds provided \$50,000 along with \$25,000 in private foundation funds and a \$75,000 match in ARRA funds, all facilitated by MEC.

With the completion of the "PV for Schools" installations MEC is continuing to focus on government and community facilities with an emphasis on fire stations throughout the service territory. In 2012 a 20kW PV system was installed at Bullhead City Fire Station #1. More fire station installations are proposed for future Plan years.

MEC continues to cooperate with NEC and consultants to evaluate potential geothermal development in our service territories.

MEC continues its Willcox Greenhouse Geothermal Project agreement with Sulphur Springs Valley Electric Cooperative and AEPCO. The project has provided approximately 2,192,050 RECs to MEC.

MEC's goal is to provide renewable energy incentives to its members and to pursue increased opportunities beyond residential systems including geothermal and MEC owned distributed generation projects. These goals must be coordinated with on-going energy efficiency ("EE") efforts. For example, MEC experienced a reduction of retail energy sales of approximately 9% since 2007, while maintaining a relatively constant number of meters. The reduced system demand reflective of the EE savings translates to a lessened need for new generation capacity. The new generation capacity reflected in this REST Plan, coupled with existing power contracts, is sufficient to meet MEC's demand.

When economic conditions improve and load growth resumes, MEC will consider pursuing additional large-scale renewable generation projects. The successful reduction of demand through even more aggressive EE programs could further diminish MEC's need for new generation, including generation from renewable resources.

### IV. REST TARIFFS

# MOHAVE ELECTRIC COOPERATIVE, INC. Bullhead City, Arizona

### RENEWABLE ENERGY STANDARD TARIFF

Effective: January 1, 2013

Purpose: To fund renewable energy requirements pursuant to an Arizona Corporation

Commission approved renewable energy standard implementation plan.

### Renewable Energy Standard ("RES") Surcharge:

On all bills for all governmental and agricultural customers with multiple meters, a RES Surcharge mandated by the Commission will be assessed monthly at the lesser of \$0.000942 per kilowatt-hour of retail electricity purchased by the consumer, or:

Governmental and Agricultural Customers

\$15.00 per service:

Governmental and Agricultural Customers whose metered demand is 3,000 kW or more for three

consecutive months:

\$ 49.00 per service.

On all bills for residential customers and highway customers, except for residential customers who receive incentives under the REST rules on or after January 1, 2013, a RES Surcharge mandated by the Commission will be assessed monthly at the lesser of \$0.0095006 per kilowatt-hour of retail electricity purchased by the customer, or:

Residential Customers:

\$3.10 per service

**Highway Customer** 

\$3.10 per service

On all bills for irrigation customers, small commercial customers and large power customers, except for small commercial and large power customers who receive incentives under the REST rules on or after January 1, 2013, a RES Surcharge mandated by the Commission will be assessed monthly at the lesser of \$0.0053714 per kilowatt-hour of retail electricity purchased by the customer, or:

**Irrigation Customers:** 

\$49.00 per service

Small Commercial Customers:

\$49.00 per service

Large Power Customers:

\$49.00 per service

Non-Residential Customers whose metered demand is 3,000 kW or more for three consecutive months:

\$ 147.00 per service

On all bills for residential, small commercial and large power customers who receive incentives under the REST rules on or after January 1, 2013, a RES Surcharge mandated by the Commission will be assessed monthly at:

**Residential Customers:** 

\$ 3.10 per service

**Small Commercial Customers:** 

\$49.00 per service

Large Power Customers:

\$49.00 per service

In the case of unmetered services, MEC shall, for purposes of billing the RES Surcharge and subject to the caps set forth above, not bill an additional RES surcharge on unmetered service to a member that has a metered service with MEC. For any new unmetered services MEC will use the lesser of (i) the load profile or otherwise estimated kWh required to provide the service in question; or (ii) the service's contract kWh for the purposes of RES Surcharge billing.

The RES Surcharge is in addition to all other rates and charges applicable to service to the customer. The applicable sales tax in Arizona will be added to bills where required. The Cooperative is authorized to pass on to the consumers the applicable proportionate part of any taxes or government impositions, which are or may in the future be assessed on the basis of the gross revenues of the Cooperative.

# MOHAVE ELECTRIC COOPERATIVE, INC. Bullhead City, Arizona

### STANDARD OFFER VOLUNTARY RENEWABLE ENERGY PROGRAM TARIFF

Effective: January 1, 2013

### VOLUNTARY RENEWABLE ENERGY PROGRAM FOR STANDARD OFFER CUSTOMERS

### Availability

Available as an option to all residential and non-residential standard offer members of the Cooperative to participate in the Cooperative's renewable energy program. Not applicable for resale, breakdown, standby or auxiliary service.

### Type of Service

Available to all classes of members, regardless of service entrance size or installed infrastructure located at the member's residence or place of business.

### Monthly Rate

\$2.00 per month for each block of 50 kWh of electric generation from renewable resources. Members electing this option may purchase one or more blocks. The rate is in addition to the otherwise applicable charges for all kWh consumed under standard offer service provided by the Cooperative.

### Term

Members of the Cooperative may enroll at any time, effective at the beginning of the next billing month. Members may terminate their participation at any time by notifying the Cooperative; termination is effective at the end of the current billing month. Terminations made in conjunction with termination of all service from the Cooperative are effective at the time of such termination. Elections to participate or to cancel participation must be made in writing on a form supplied by the Cooperative.

### Conditions

All funds collected under this Schedule will be used solely to construct, operate, and maintain renewable energy projects carried out by the Cooperative in Arizona, including solar electric generating projects. Electric energy generated by renewable resources in blended with other energy throughout the Cooperative's distribution system. Energy delivered to members electing this option will consist of such blended energy.

### Tax Adjustment

The applicable sales tax in Arizona will be added to bills where required. The Cooperative is authorized to pass on to the consumers the applicable proportionate part of any taxes or government impositions, which are or may in the future be assessed on the basis of the gross revenues of the Cooperative.

### Terms of Payment

Billing made under this schedule will be due and payable upon receipt and past due fifteen (15) days from the date the bill is mailed. Service will be subject to disconnect in accordance with the Cooperative's collection policy.

# MOHAVE ELECTRIC COOPERATIVE, INC. Bullhead, Arizona

### RENEWABLE ENERGY CUSTOMER SELF-DIRECTED TARIFF

Effective: January 1, 2013

Renewable Energy Standard ("RES") Customer Self-Directed Option

### **Application**

The RES Customer Self-Directed Option is applicable to single and three phase service for Non-Residential Customers with multiple meters that pay more than \$ 25,000 annually in RES Surcharge funds pursuant to the Renewable Energy Standard Tariff for any number of related accounts or services within the Cooperative's service territory.

### Eligible Customer

An Eligible Customer may apply to the Cooperative to receive funds to install Distributed Renewable Energy Resources. An Eligible Customer seeking to participate in this program shall submit to the Cooperative a written application that describes the Renewable Energy Resources that it proposes to install and the projected cost of the project. An Eligible Customer shall provide at least half of the funding necessary to complete the project described in its application.

An Eligible Customer shall enter into a contract with the Cooperative that specifies, at a minimum, the following information: the type of Distributed Generation ("DG") resource, its total estimated cost, kWh output, its completion date, the expected life of the DG system, a schedule of Eligible Customer expenditures and invoices for the DG system, Cooperative payments to an Eligible Customer for the DG system, and the amount of a Security Bond or Letter of Credit necessary to ensure the future operation of the Eligible Customers' DG system, metering equipment, maintenance, insurance, and related costs.

If proposed to be connected to the Cooperative's electrical system, an Eligible Customer's DG resource shall meet all of the Cooperative's DG interconnection requirements and guidelines before being connected to the Cooperative's electrical system.

All Renewable Energy Credits derived from the project, including generation and extra credit multipliers, shall be applied to satisfy the Cooperative's Annual Renewable Energy Requirement.

The funds annually received by an Eligible Customer pursuant to this tariff may not exceed the amount annually paid by the Eligible Customer pursuant to the RES Surcharge Tariff.

### VII. UNIFORM CREDIT PURCHASE PROGRAM

Sample Forms

### RENEWABLE ENERGY INCENTIVE TARIFF (REST)

### Uniform Credit Purchase Program Application

### RESERVATION FORM

This form to be used to request incentive funds from the Renewable Energy Standards Tariff.

Your request in the MEC REST program assumes that you will owner-occupy the structure and operate your system continuously for a period of ten (10) years after you receive the incentive payment from MEC.

After completing the form, sign and submit to the Energy Management Department to be considered for incentive funds. If funds are not available at the time your reservation form is received you will be placed on a wait list until there are sufficient monies to fund the request. The wait list is based on a first come first serve basis. When the funds become available, the member will be notified to complete the full enrollment packet (Uniform Credit Purchase Program Application and the Interconnect Agreement). The member will have a 60 day period to begin the installation process once the funds have been obligated by Mohave Electric.

### RENEWABLE ENERGY INCENTIVE TARIFF (REST)

### Uniform Credit Purchase Program Application

### Incentive Program Terms for Leased Renewable Energy Systems

Mohave Electric Cooperative (MEC) requires a copy of the lease agreement including all terms and conditions to be submitted along with the Reservation Form.

The following terms must apply and be included in the lease agreement in order for the Reservation to be considered for incentive funds:

- 1. Environmental attributes such as Renewable Energy Credits (RECs) associated with the electricity produced by the system are assigned to MEC for the life of the system.
- 2. Incentive/rebate check is made payable to Mohave Electric member(s) only.
- 3. Sale of electricity to a third party is prohibited.
- 4. Any system that is removed within the first 10 years of operation will require prorated return of the rebate as described in the SunWatts Renewable Energy Incentive Program terms and conditions.

No language in the lease agreement that is contradictory to these terms will be accepted. The lease agreement must be signed by parties, MEC member (lessee) and leasing entity (lessor).

After reading these terms, MEC member(s) must initial on first page of this Reservation Form where indicated.

# RENEWABLE ENERGY INCENTIVE PROGRAM—Step 1, Section 1 Uniform Credit Purchase Program Application

For residential and commercial systems, the combined generation capacity at the location is limited to a maximum of 125% of the total connected load and is limited to one installation per service entrance.\*\* The maximum amount of an incentive payment will be \$25,000.

Effective January 2013, as adopted by the Arizona Corporation Commission, the Renewable Energy Incentive Program, MEC will pay its members:

1) Residential and Small Commercial PV and Wind Systems (an acceptable renewable energy technology\* such as a photovoltaic array or a wind turbine):

<u>System size up to 50kW:</u> MEC will pay \$ 0.35/watt of installed nameplate capacity, up to 40% (not to exceed \$25,000) of the total cost of the system.

- 2) You, a Mohave Electric Cooperative member, submit a signed application and W9 tax form *prior* to system installation.
- 3) You select and have installed a qualifying solar electric system, wind turbine, or other renewable energy technology at your home or business. This home or business must be served by MEC and occupied by an MEC member. Furthermore, your system must meet all qualifications listed in the following "Qualifications" section.
- 4) You must use a licensed electrical or solar contractor to install the system and the installation must meet IEEE standards, the National Electric Code, as well as the MEC Interconnection standards. (See Interconnect Agreement, Step 2). The contractor must also certify the system's installed nameplate capacity in watts. The incentive amount that you receive is dependent on the installed nameplate capacity in watts.
- 5) You sign an agreement assigning rights to the associated environmental attributes, such as Renewable Energy Credits (RECs) to MEC.
- 6) The qualified net metering facility may be eligible for net metering. Please refer to the terms and conditions in the net metering application and the ACC approved Net Metering Service Tariff.
- 7) You, the owner of the renewable energy system, are responsible for payment of normal system repairs and maintenance to the unit, including labor.

- 8) In order to receive the rebate, you must submit the following to MEC:
  - a. Verification from a MEC representative that the installed unit meets the qualifications as set out in the Incentive Program Systems Qualifications page.
  - b. Proof of code inspection of the installation and of the system's installed nameplate capacity in watts certified by a licensed contractor. Failure to pass a code inspection and have a licensed contractor perform the installation and certify the system's output will result in refusal of the rebate.
  - c. A System Qualifications-Contractor Certification form initialed by the contractor (Step 3).
  - d. Copies of all building permits and inspection cards.
  - e. Keep a copy of all documents for your records.
- 9) Once the documentation is submitted, please allow 30 days for your rebate to be processed. In the event that demand for funds exceeds a period allocation, MEC may provide reservations to those projects above the allocation depending on the current REST compliance status and availability of funding. In the event that funds collected for use in the Renewable Energy incentive program are not fully subscribed in a program year, those funds will be applied towards the next program year. The funds will be allocated to achieve the required energy outcome between residential and non-residential projects.
- 10) After reading the instructions in Step 1, Section 1, member(s) are required to initial: (member initials)

### Submit documents to:

Mohave Electric Cooperative, Inc. Energy Management Department PO Box 1045 Bullhead City, AZ 86430

Phone: 928-763-1100 (ask for Energy Management Department)

FAX: 928-763-7357

- \* Those renewable energy technologies which qualify for inclusion in the Arizona Corporation Commission Renewable Energy Standard & Tariff.
- \*\* A service entrance is the electric meter location and associated wiring on the member's premises.

### RENEWABLE ENERGY INCENTIVE PROGRAM—Step 1, Section 3

# OPERATION OF RENEWABLE ENERGY SYSTEM, SALE OF PROPERTY AND MEMBER'S REFUND OBLIGATION

Your participation in the MEC Renewable Energy Incentive Program assumes that you will owner-occupy the structure and operate your system continuously for a period of ten (10) years after you receive the incentive payment from MEC. If you fail to do so, then you will be considered to be out of compliance with the program requirements and MEC will be entitled to reimbursement of the incentive payment.

You are required to notify MEC within five (5) business days after your system is either removed from your property or is no longer operational. MEC will consider this notification as the removal date. If you fail to maintain and operate your system for at least one year after the date you receive the incentive payment, liquidated damages may apply. In such event, you will be required to reimburse us the total amount of the incentive payment in certified funds no later than five (5) business days after your receipt of our request that you refund the incentive payment to MEC. If the removal date occurs after the first year but before the end of the tenth year, we reserve the right to request a pro-rated refund of the incentive payment. If your removal date occurs in Year 2, you would refund to MEC 80% of the incentive payment, Year 3, 70%, in Year 4, 60% and so on.

MEC may waive the foregoing reimbursement obligation or any other instance of your noncompliance if it is determined that the renewable energy system is not operational due to equipment malfunction or other disrepair that is not attributable to you, and, you are actively and reasonably making diligent, good faith efforts to repair the renewable energy system and return it to operation.

When MEC receives your reimbursement payment this incentive agreement will be deemed terminated and neither MEC nor you will have any further obligation to each other, but resolution of our respective obligations and rights will continue to be determined by this agreement until our relationship with each other is finally and completely resolved.

There are certain important conditions to consider if you sell your property where the renewable energy system is installed.

- a. You are required to notify MEC in writing promptly in the event that you intend to sell your property.
- b. If you sell your property within one (1) year after we pay you the incentive payment and your buyer does not continue to operate and maintain the renewable energy system you will be required to reimburse MEC the total amount of the incentive payment.
- c. If you sell your property more than one (1) year after you receive the incentive payment, you must make arrangements to have your buyer agree to these terms and conditions whereby your buyer will continue to operate the renewable energy system.

After reading the instructions in Step 1, Section 3, member(s) are required to initial: (member initials)

### RENEWABLE ENERGY INCENTIVE PROGRAM—Step 1, Section 4

### SYSTEM QUALIFICATIONS

All member-owned renewable energy system components must meet the following system and installation requirements to be connected to the MEC electric distribution system. Your licensed contractor will be required to initial compliance with the following items upon completion of system installation. (Refer to System Qualifications Contractor Certification—Step 3)

- 1. The system components must be certified as meeting the requirements of IEEE-929 Recommended Practice for Utility Interface of Photovoltaic Systems.
- 2. The system components must be certified as meeting the requirements of UL 1741 Power Conditioning Units for use in Residential Photovoltaic Power and be covered by a non-prorated manufacturer's warranty of at least two years.
- 3. The system design and installation must meet all requirements of the latest edition of the National Electric Code (NEC), including Article 690 and all grounding, conductor, raceway, over-current protection, disconnect and labeling requirements.
- 4. The system and installation must meet the requirements of all federal, state and local building codes and have been successfully inspected by the building official having jurisdiction. To do so, the installation must be completed in accordance with the requirements of the latest edition of the NEC in effect in the jurisdiction where the installation is being completed, including, without limitation, Sections 200-6, 210-6, 23070, 240-3, 250-26, 250-50, 250-122, all of Article 690 pertaining to photovoltaic systems, thereof, all as amended and superseded.
- 5. A wind turbine system must be certified as meeting the requirements of UL 1741 Standard for Safety for Inverters, Converters, Controllers, and Interconnection System Equipment for Use With Distributed Energy Resources, 1st Edition; IEEE 1547 2003; CAN/CSA-C22.2 No 107.1-01, 3rd Edition.
- 6. An AC disconnect means shall be provided on all ungrounded AC conductors and shall consist of a lockable gang-operated disconnect clearly indicating open or closed. The switch shall be visually inspected to determine that the switch is open. The switch shall be clearly labeled stating "Renewable Energy System AC Disconnect."
- 7. All system installations must be completed in a professional, workman-like and safe manner.
- 8. All system installations must be completed by a licensed electrical contractor. NO EXCEPTIONS.
- 9. It is recommended that the member have a separate member-owned meter to measure the output of the member-owned renewable energy system.
- 10. A lock will be installed to prevent operating the system prior to the MEC verification. The system is <u>not</u> to <u>be activated or operated</u> until after it passes the MEC verification.

### NET METERING SERVICE TARIFF AND APPLICATION

Mohave's Net Metering Service Tariff is approved by the Arizona Corporation Commission and establishes the terms and conditions of Net Metering service.

Net Metering service is available, but not required, for all end-use retail customers of the Cooperative with metered kWh usage with a qualifying Net Metering Facility.

Under Net Metering the electric energy generated by or on behalf of the member from a qualifying Net Metering Facility and delivered to the Cooperative's distribution facilities may be used to offset electric energy provided by the Cooperative during the applicable billing period as specified in this Tariff. Service under this Tariff is subject to: installation of a bidirectional meter (a new meter may or may not be needed); availability of enhanced metering and billing system upgrades; the rated capacity of the customer's Net Metering Facility not exceeding the Cooperative's service capacity; and the customer complying with all of the Cooperative's interconnection standards. Under this agreement the customer agrees to assign all environmental attributes, including RECs, to MEC.

The customer shall also be required to sign and complete a Net Metering Application and Interconnect Agreement prior to being provided Net Metering Service. A customer that installs a Net Metering Facility is not required to take service under this Tariff, but still must comply with the Cooperative's interconnection standards.

Net Metering commences **after** the completion of all applicable metering, billing, and administrative terms and conditions for Net Metering service. Net Metering is effective on future usage only and is not retroactive.

#### **Net Metering Facility**

Net Metering Facility means a facility for the production of electricity that:

- Is operated by or on behalf of the customer and is located on the customer's premises;
- Is intended to provide part or all of the customer's requirements for electricity;
- Uses Renewable Resources, a Fuel Cell or CHP to generate electricity;
- Has a generating capacity less than or equal to 125% of the customer's total connected load, or
  in the absence of customer load data, capacity less than or equal to the customer's electric
  service drop capacity; and
- Is interconnected with and can operate in parallel with the Cooperative's existing distribution system.

#### Meterina

Customers served under this Tariff will require a bidirectional meter that will register and accumulate the net electrical requirements of the customer and shall have other capabilities similar to meter that is being replaced or that would be installed for the service (e.g., smart metering capabilities). The Cooperative will install such a meter at the customer's Net Metering Facility if proper metering is not already present. The incremental metering costs for bidirectional metering and the facility meter will be incurred by the Cooperative.

#### Billing

During the billing period for:

- Customer Purchases in excess of Customer Supply
  - Cooperative shall bill the customer for the net kWh supplied by the Cooperative in accordance with the Cooperative's applicable Standard Retail Rate Schedule.
- Customer Supply in excess of Customer Purchases (Excess Generation)
  - o Cooperative shall credit the customer the Excess Generation kWh in subsequent billing periods to reduce the kWh supplied (not kW or kVa demand or customer charges).
- Basic Service Charges and Demand charges (either metered or contract) and all other elements of the Cooperative's applicable Standard Retail Rate Schedule will continue to apply in full, except that the monthly "Customer Charge" for the applicable Optional Time-of-Use Rate will be applied whether or not the customer has elected the Time-of-Use rate. Residential Customer Charge will be \$15 per month.
   Small Commercial Customer Charge will be \$30 per month.
- For the last billing period of each Calendar Year or for the last billing period at the time the customer discontinues taking service under this rate schedule:

The Cooperative shall issue a billing credit to the customer for any remaining Excess Generation balance. In the event the customer's electric service is terminated, after applying a billing credit for any Excess Generation up to the amount the customers owe the Cooperative, the Cooperative shall issue a check for the remaining value of the Excess Generation balance. The payment or credit will be determined at the Cooperative's Annual Average Avoided Cost, which shall be updated annually and are as specified below:

2011 Annual Purchase Rate (cents/kWh): \$0.03912\*

\*This amount is currently in effect. The Arizona Corporation Commission (ACC) re-evaluates avoided cost amounts annually and the amount is subject to change based on that review.

 An Administrative Charge may be charged by the Cooperative to collect new or additional costs the Cooperative incurs associated with the provision of Net Metering service (such as additional data communication access and billing costs) upon filing with and approval of such charge by the Arizona Corporation Commission pursuant to ACC R14-2-2305.

After completing the application, member(s) must sign and submit to the Energy Management **Department.** (Interconnect Agreement is also required) PRINT Member Name(s): Address: Mohave Electric Account #: Phone: Service Location: Description of Renewable Energy Resource: I (we) certify that I (we) received and read a copy of Mohave's Net Metering Tariff. understand and agree to comply with the terms and conditions of the tariff, and that this agreement will not be terminated earlier than one year after its effective date. Signs must be made of hard plastic with engraved letters (no stickers) and attached with rivets or screws. Installer may apply signage during MEC system verification, when meter door is open.

### RENEWABLE ENERGY INCENTIVE PROGRAM—Step 4

### SUBMITTAL OF FINAL REBATE APPLICATION FORMS

After the Solar or Wind Generation system has been installed and passed all City and/or County building inspections, the Mohave Electric Cooperative member submits the following paperwork to finalize the rebate application procedure:

- A copy of the final bill or invoice from the Solar/Wind Contractor.
- Copy of the Building Permit.
- Copy of the final Building Inspection.
- The System Qualifications-Contractor Certification form with code requirements initialed by a licensed electrician (step 3).

At this point, all three steps are complete and now the system must pass system verification by Mohave Electric Cooperative's Energy Management Specialist and Operations Supervisor for compliance with MEC Interconnection Agreement.

It is also important to remind you that you cannot activate of operate your system before it has passed the MEC verification.

After the system verifications are passed, the rebate will be processed and issued to the Member.

### VIII. INTERCONNECTION APPLICATION

### RENEWABLE ENERGY INCENTIVE PROGRAM—Step 2

### INTERCONNECT AGREEMENT

Application for Operation of Member-Owned Small Generation Attached to MEC \*To be approved by MEC prior to installation of the renewable energy system\*

This application should be completed as soon as possible and returned to MEC's Energy Management representative in order to begin processing the request.

INFORMATION: This application is used by MEC to determine the required equipment configuration for the Customer interface. Every effort should be made to supply as much information as possible. This application is intended to apply to member-owned systems attached to MEC distribution system on the member side of the meter.

#### Responsibilities of Member for Installation, Operation and Maintenance of Net Metering Facilities

- 1) The Member will, at its own cost and expense, install, operate, maintain, repair, and inspect, and shall be fully responsible for, its facilities.
- 2) The Member shall conduct operations of its facilities in accordance with industry standards. Maintenance of facilities by the Member shall be performed in accordance with the applicable manufacturers' recommended maintenance schedule.
- 3) The Member agrees to cause its facilities to be constructed in accordance with the Rules and specifications equal to or better than those provided by the National Electrical Safety Code and the National Electrical Code, both codes approved by the American National Standards Institute, in effect at the time of construction.
- 4) The Member covenants and agrees to cause the design, installation, maintenance, and operation of, its facilities so as to reasonably minimize the likelihood of a malfunction or other disturbance, damaging or otherwise affecting or impairing the Cooperative's system. The electrical output of the Member's facilities shall not cause disturbance on or damage to the Cooperative's electrical system.
- 5) The Member shall exercise reasonable care to assure that the electrical characteristics of its facilities will not result in significant impairment of service to other customers or in interference with operation of computer, telephone, television, or other communications systems or facilities.
- 6) The Member shall comply with all applicable laws, regulations, zoning codes, building codes, safety rules and environmental restrictions applicable to the design, installation, operation and maintenance of its facilities.

7) The Member will notify the Cooperative of any emergency or hazardous condition or occurrence with the Member's facilities which could affect safe operation of the Cooperative's system.

#### **Responsibilities of Cooperative**

MEMBER/APPLICANT INFORMATION

The Cooperative shall perform an inspection of the interconnected facilities prior to energization to verify that the facility meets the interconnection requirements of the Sun Watts program.

The Cooperative will perform subsequent periodic inspections of the interconnected facilities to verify the facility continues to meet those interconnection requirements.

The Cooperative will notify the Member if there is evidence that the Member's facilities operation causes disruption or deterioration of service to Cooperative's system.

Photovoltaic

Wind
Other ·
ESTIMATED LOAD AND GENERATOR RATING
The following information will be used to help properly design the interconnection between MEC's facilities and the Members facilities. This information is not intended as a commitment or contract for billing purposes.
Total Site Load(kW)
Residential Commercial Industrial
Generator Nameplate Rating (kW)
Annual Estimated Generation (kWh)
DESCRIPTION OF PROPOSED INSTALLATION AND OPERATION
Give a general description of the proposed installation, including a detailed description of its planned location, number of panels or turbines, model numbers, and nameplate output.
INVERTER DATA (if applicable)
Manufacturer: Model:
Rated Power Factor (%): Rated Voltage (Volts):
Rated Amperes:
Inverter Type (ferroresonant, step, pulse-width modulation, etc):
Type commutation: forced line Harmonic Distortion: Maximum Single Harmonic (%)
<b>Note:</b> Attach all available calculations, test reports, and oscillographic prints showing inverter output voltage and current waveforms.

#### **MEMBER AGREEMENT AND SIGNATURE:**

I hereby certify that, to the best of my knowledge, the information provided in this Interconnection Agreement is true. I agree to provide any further information required during the Interconnection Application Process and to install and operate the interconnection equipment according to the Terms and Conditions outlined herein.

I warrant that this Interconnect Agreement was executed by the person whose name appears below and that they are members of the Cooperative.
